SKILLS

- Javascript
- Python
- Java
- C
- Bash
- HTML
- CSS
- React.js
- React Router
- Node.js
- Express
- Fast-API
- RESTful APIs
- WebSocket
- Socket.IO
- Uvicorn
- JWT Authentication
- MongoDB
- MySQL
- Vector DBs
- AWS
- EC2
- S3
- IAM
- AWS Lambda
- Cloud-Watch
- Boto3
- Elastic Load Balancing
- Linux
- Nginx
- Apache
- Docker
- Terraform
- Ansible
- Jenkins
- GitHub Actions
- CI/CD
- CloudFlare
- Infrastructure as Code
- Generative ai
- LLMs
- AI Agents
- RAG
- OpenAI Whisper
- Piper TTS
- Gmail API
- Git
- GitHub
- Postman
- VS Code
- npm

EDUCATION

Graduation

Course: B.C.A.

College: GLA University, Mathura

Year of Passing: 2026

Schooling

INTERNSHIPS

Delvex Innovations Pvt Ltd

March 2026 - August 2026

-So basically, I was responsible as a Full-Stack Developer there, I built web applications from frontend UIs to backend microservices, databases, and cloud pipelines. My main project was Cloud Command Center—an AWS Infrastructure AI Assistant, which I engineered end-to-end.

What I Learned:

- Mastered full-stack architectures and real-time state sync.
- Learned to bridge web apps with next-gen AI pipelines.
- Learned about AWS, Docker, Terraform, Linux, Nginx, Apache, Basic networking.
- Team Work.

PROJECTS

Real-Time Chat Application

• **Live**

Tech Stack: React.js, Node.js, Express.js, MongoDB, Socket.IO, JWT, HTML, CSS, Git

- Built full-stack MERN chat platform supporting real-time one-to-one messaging with instant delivery via Socket.IO/WebSocket.
- Designed MongoDB schema for users and conversations; implemented JWT-based authentication and session management.
- Developed responsive React.js frontend with login/signup, message history, and smooth UX.

iQuiz —Real-TimeQuiz Platform

• **Live**

Tech Stack: React.js, Node.js, Express.js, MongoDB, Socket.IO, JWT, HTML, CSS, Git

- Designed and built a multiplayer live-quiz platform with PIN-based session joining and real-time score updates.
- Implemented full CRUD for quizzes and questions; built live-hosting feature generating unique PINs per session.
- Managed real-time participant interactions and leaderboard updates using Socket.IO events.

Cloud Command Center — AWS Infrastructure Assistant

Tech Stack: React.js, Python, FastAPI, Groq LLM, AWS SDK(Boto3), EC2, CloudWatch

- Built a full-stack AWS infrastructure assistant enabling natural-language queries over EC2 instances, CloudWatch metrics, and security groups.
- Implemented Groq LLM function-calling to translate natural language into structured AWS SDK (Boto3) API calls.
- Designed an agentic AI workflow capable of reasoning over multi-step AWS queries and returning consolidated, human-readable responses.

JESSY-AI-Powered Voice Assistant

Tech Stack: Python, FastAPI, React.js, Groq LLM, Whisper, WebSocket, ADB, UIAutomator2, TTS.,

- Built an AI-powered desktop voice assistant with wake word detection, speech recognition, Groq LLM reasoning, and text-to-speech interaction.
- Engineered a real-time FastAPI and WebSocket architecture connecting the backend with a React dashboard for live assistant status, conversations, actions, and voice interaction.
- Implemented intelligent computer and Android phone automation, enabling natural-language control of applications, files, contacts, calls, and YouTube directly through voice commands.
